Description

This inspection hatch is designed to provide easy access to the tubes of a ventilation system. This product makes it possible to easily inspect or clean the inside of the tubes. The hatches are available in different sizes and come with a cutting mold for accurate cutting. The hatch consists of two parts: an outer plate and an inner plate. For mounting, the inner plate must first be placed into the tube after which the hole can be sealed airtight by tightening the outer plate with the knobs.
